

FOR IMMEDIATE RELEASE: (4/13/2006)

Austin, Texas – Is Biotechnology on the rise in Austin? Let's hope so. Embark Scientific, LLC opens its doors in Austin offering several unique laboratory services including molecular biology and proteomics assay development and contract laboratory services.

Embark Scientific was borne from a consulting company, S&S BioConsulting, LLC which opened for business in 2004 to provide researchers with customized onsite laboratory services and consulting to improve productivity in their laboratories. Embark Scientific offers a new twist by offering a suite of services designed to meet the needs of any size laboratory with special pricing for academic and start-up laboratories.

Whether it is a protein-based or a DNA assay that needs to be built, or whether researchers prefer Real-Time or Bead-based platforms, Embark Scientific can accommodate and that is not all. They provide protocol development, validation assistance and are capable of running the assays they build and more. The thinking behind the new company: Many good research ideas fall to the wayside because of financial and time restraints. Embark Scientific wants to make a difference by offering custom-tailored services for any size laboratory and pocketbook.
